The Connectivity of Innovation in the Construction Industry Malena Ingemansson Havenvid, Åse Linné, Lena E. Bygballe, Chris Harty, 2019-04-01 The construction industry is currently experiencing accelerating developments concerning societal demands along with project complexity, internationalization and digitalization. In an attempt to grasp the consequences of these demands on productivity and innovation, this edited book addresses how innovation is likely to take place with a more long-term perspective on the construction sector. While existing literature focuses on organizational discontinuity and fragmentation as the main reasons for the apparent lack of innovation in the industry, this book highlights the connectivity of construction actors, resources and activities as fundamental for understanding how innovation takes place. Through 15 empirically grounded chapters, the book shows how innovation is part of construction processes on various levels, including project, firm and industry, and that these innovation processes are characterized by organizational and technological connectivity over time. Written by European business management scholars, the chapters cover empirical cases and examples from both a multi-organizational and a multi-international perspective in terms of covering the viewpoints of different industry actors and the contexts of several different European countries including: Sweden, Norway, the UK, Italy, France, Hungary and Poland. By illustrating how connectivity is part of innovation processes in the creation of single-product innovations, of various innovations within and across projects, as well as a fundamental aspect of the processes in which innovations cross nations, the book provides a new angle on how to understand construction innovation and where the industry might (or needs to) be heading next. This book is essential reading for anyone interested in construction management, project management, engineering management, innovation studies, business and management studies.

Management of Construction Projects John Schaufelberger,Len Holm,2024-03-14 Unique among construction project management textbooks, *Management of Construction Projects*, third edition, takes the constructor's perspective, carefully analyzing a complex, real-world construction case study from multiple angles to demonstrate the skills, knowledge, and techniques students require to become successful project managers. Popular as an undergraduate text and as a contractor

resource, the book identifies key stages of the project-management process, such as delivery methods and contracts; estimating, planning, and scheduling; preconstruction services; subcontracting and material management; documentation, communications, and payment; controls, quality, and safety; leadership and ethics; and claims, disputes, and close-out. This third edition includes a novel case study, a new chapter on preconstruction services, updated contract forms and figures, and additional student exercises, and integrates use of project management technology. Topics include building information models, sustainable construction, environmental compliance, lean construction, and off-site construction. Boxed examples, or short case studies, have been included with each chapter. These examples correspond directly to the chapters in which they are included and give the reader an applied approach to learning the concepts presented. While primarily focused on the management of commercial projects, the principles and techniques in Management of Construction Projects also apply to residential, industrial, and heavy construction. Written in straightforward language from a constructor's perspective, this textbook prepares upcoming construction project managers with everything they need to see a successful project through from start to finish.
