Taking into account recent developments in social networking and mobile communications, this new edition tackles a range of themes spanning criminology, sociology, law, politics and cultural studies, including: - computer hacking - cyber-terrorism - piracy and intellectual property theft - financial fraud and identity theft - hate speech - internet pornography - online stalking - policing the internet - surveillance and censorship Complete with useful recommendations for further reading, incisive discussion questions and an updated glossary of key terms, *Cybercrime and Society* is an essential resource for all students and academics interested in cybercrime and the future of the Internet.

Aplicaciones informáticas para el comercio MAS ALIQUE, PEDRO,2025-04-10 El comercio es una actividad que crea riqueza y proporciona bienes y servicios a la sociedad: mediante el uso de herramientas informáticas aumenta su productividad y mejora la experiencia del cliente. Este libro desarrolla los contenidos del módulo profesional de Aplicaciones Informáticas para el Comercio, del Ciclo Formativo de grado medio en Actividades Comerciales, perteneciente a la familia profesional de Comercio y Marketing. Aplicaciones informáticas para el comercio expone una amplia variedad de herramientas informáticas, equipos y software para el desarrollo de la actividad comercial y publicitaria, así como la legislación sobre facturación electrónica, obligaciones fiscales y laborales. Está organizado en seis unidades en las que, además de las explicaciones teóricas y prácticas, se han incluido más de 300 actividades de distinto tipo, que implican tanto

el uso de las herramientas expuestas como de la inteligencia artificial, para mostrar el potencial de este tipo de nuevos recursos. El contenido teórico se acompaña asimismo de interesantes casos prácticos propuestos y resueltos, mapas conceptuales, temas de debate con enlaces web de interés para profundizar en temas específicos. Pedro Mas Alique es Ingeniero Industrial, Licenciado en Ciencias (Matemáticas) y Doctor Ingeniero Industrial. Ha trabajado durante años en el sector del automóvil, como cliente y como proveedor, y su actividad ha sido en muchos casos de apoyo y colaboración con la función comercial. Tiene una gran experiencia docente, con alumnado muy diverso, desde empleados de las fábricas en las que ha trabajado hasta formación permanente de adultos en programas de la Universidad de la Experiencia. Ha ejercido la enseñanza en las modalidades de distancia, presencial, e-learning y blended learning preparando material docente de distinto tipo y ha ejercido cargos de gobierno en la Universidad.

Molecules Of Emotion Candace Pert, 2012-12-11 Why do we feel the way we feel? How do our thoughts and emotions affect our health? Are our bodies and minds distinct from each other or do they function together as part of an interconnected system? In MOLECULES OF EMOTION, neuroscientist Candace Pert provides startling and decisive answers to these long-debated questions, establishing the biomolecular basis for our emotions and explaining these new scientific developments in a clear and accessible way. Her pioneering research on how the chemicals inside us form a dynamic information network, linking mind and body, is not only provocative, it is revolutionary. In her groundbreaking book, Candace Pert offers a new scientific understanding of the power of our minds and our feelings to affect our health and well-being.

Code 2.0 Lawrence Lessig, 2009-12-30 Lawrence Lessig's Code and Other Laws of Cyberspace v1 quickly began to define a certain vocabulary for thinking about the regulation of cyberspace. More than any other social space, cyberspace would be controlled or not depending upon the architecture, or code, of that space. And that meant regulators, and those seeking to protect cyberspace from at least some forms of regulation, needed to focus not just upon the work of legislators, but also the work of technologists. Code version 2.0 updates the original work. It is not, as Lessig writes in the preface, a new work. The aim of the update was to recast the argument in the current context, and to clarify the argument where necessary. While Lessig himself has strong views about preserving important liberties that cyberspace originally protected, this book does not push any particular set of values. Unlike Lessig's other books, The Future of Ideas, and Free Culture, this book has no particular political agenda. Instead, the objective of Code is to introduce and defend a particular way of understanding regulation, and to describe the trend that we should expect regulation in cyberspace to take. Code v2 is published under the terms of the CC Attribution-ShareAlike license. Money raised from the sale of this book supports the development of free software and documentation.

Mapping the Total Value Stream Mark A. Nash, Sheila R. Poling, 2011-03-23 Mapping the Total Value Stream defines and elaborates on the concepts of value stream mapping (VSM) for both production and transactional processes. This book reshapes and extends the lessons originally put forward in a number of pioneering works including the popular, Value Stream Management for the Lean Office. It reinforces fundamental concepts and theoretical models with real-world applications and complete examples of the value stream mapping technique. To educate VSM mappers on the specific mechanics of the technique, the text provides in-depth explanations for commonly encountered situations. The authors also provide a more complete perspective on the concept of availability. While they discuss availability of equipment in transactional processes, they extend the concept by elaborating on availability as it applies to employees. The calculation of process lead time for work queues is taken to an advanced level – not only is the calculation of this lead time explained, but the text also covers the very real possibility of having more work in the queue than available time. While previous books have focused on only production process VSM or transactional process VSM, this work meets the real needs of both manufacturers and service sector organizations by dealing with both types. It goes beyond explaining each scenario, to teach readers what techniques are commonly applicable to both, and also explains areas of difference so that mappers will be able to readily adapt to whatever unique situations present themselves.

Cyber-security of SCADA and Other Industrial Control Systems Edward J. M. Colbert, Alexander Kott, 2016-08-23 This book provides a comprehensive overview of the fundamental security of Industrial Control Systems (ICSs), including Supervisory Control and Data Acquisition (SCADA) systems and touching on cyber-physical systems in general. Careful attention is given to providing the reader with clear and comprehensive background and reference material for each topic pertinent to ICS security. This book offers answers to such questions as: Which specific operating and security issues may lead to a loss of efficiency and operation? What methods can be used to monitor and protect my system? How can I design my system to reduce threats? This book offers chapters on ICS cyber threats, attacks, metrics, risk, situational awareness, intrusion detection, and security testing, providing an advantageous reference set for current system owners who wish to securely configure and operate their ICSs. This book is appropriate for non-specialists as well. Tutorial information is provided in two initial chapters and in the beginnings of other chapters as needed. The book concludes with advanced topics on ICS governance, responses to attacks on ICS, and future security of the Internet of Things.

Startup Cities Peter S. Cohan, 2018-02-07 This book offers a comprehensive model for explaining the success and failure of cities in nurturing startups, presents detailed case studies of how participants in that model help or hinder startup activity, and shows how to apply these lessons to boost local startup activity. *Startup Cities* explains the factors that determine local startup success based on a detailed comparison of regional startup cities—pairing the most successful and less successful cities within regions along with insights and implications from case studies of each of the model’s elements. The book compares local city pairs, highlighting factors that distinguish successful from less successful cities and presents implications for stakeholders that arise from these principles. Peter Cohan is a lecturer of Strategy at Babson College and one of the world’s leading authorities on regional startup ecosystems. Starting in 2012, he created and led Startup Strategy courses that explore four regional startup ecosystems—Hong Kong/Singapore, Israel, Paris, and Spain/Portugal. These courses are based on an original framework for evaluating why a few cities host most startup creation and the rest fail to do so. In running these courses, Peter has built a network of local policymakers, investors, entrepreneurs, and professors from which he draws practical insights for what distinguishes successful Startup Commons from their peers. The book provides vital benefits to these stakeholders. What You’ll Learn Local policymakers will know how to build a local team to set objectives for their local Startup Commons and develop a comprehensive strategy to realize those goals Entrepreneurs will know how to choose where to locate their startups based on factors such as the supply and quality of talent—from chief marketing and technology officers to coders and sales people; quality of life, access to capital, customers, and mentors; and costs such as salary and real estate expense University administrators and faculty will know how to take research out of their labs and house it in companies that can commercialize that research, create academic programs that will encourage more entrepreneurship among their students, and connect with local policymakers and capital providers to spur local startup activity Capital providers will know how to scout out emerging startup cities where they can get access to the best investment opportunities at more favorable valuations and have greater influence on how the local startup scene evolves Who This Book Is For All key startup stakeholders, including local policymakers (mayors, directors of economic development, treasurers, controllers, presidents of regional chamber of commerce), entrepreneurs (CEOs, chief marketing officers, chief financial officers, chief HR officers, chief technology officers), universities (presidents; deans of faculty; provosts; professors of finance, management, and entrepreneurship; directors of international education), and capital providers (venture capital partners and associates, angel investors, bank loan officers, managers of accelerator operations)

Balancing Work and Family in a Changing Society Elisabetta Ruspini, Isabella Crespi, 2018-08-15 Both research and policy on balancing work and family life have tended to focus on mothers' lives. There has been a general lack of comparative research to the complex intersection between old and new forms of masculinity; and between fatherhood, work-life balance, gender relations and children's well-being. As a result, men's fathering roles and their struggle with work-life balance have

often been neglected. These cultural challenges should be better theorized within family and social policy research. This volume examines how fathers fulfill their roles both within the family and at work and what institutional support could be of most benefit to them in combining these roles.

Electronic Eros Claudia Springer, 1996 A study of the love affair between humans and machines, which has now expanded into cyberspace, where computer technology seems to promise heightened erotic fulfilment and the threat of human obsolescence. The author explores the techno-erotic imagery in films, cyberpunk fiction, comic books, television, software, and writing on virtual reality and artificial intelligence, showing how these futuristic images actually erode current debates concerning gender roles and sexuality. technology, the author offers an analysis of eroticism and gender in such films as RoboCop, The Terminator, Eve of Destruction and Lawnmower Man, and cyberpunk books such as Neuromancer, Count Zero, Virtual Light, A Fire in the Sun, and Lady El. She also looks at comic books like Cyberpunk and Interface, and at the television series Mann and Machine, demonstrating that while new technologies have inspired change in some pop culture texts, others stubbornly recycle conventions from the past, refusing to come to terms with the new social order.

Collective Intelligence Pierre Levy, 1997-08-21 The number of travelers along the information superhighway is increasing at a rate of ten percent a month. How will this communications revolution affect our culture and society? Pierre Levy believes that rather than creating a society where machines rule man, the technology of cyberspace will have a humanizing influence on us, and foster the emergence of a collective intelligence--a meeting of minds on the Internet--that will validate the contributions of the individual. With a depth of scholarship and imaginative insight rare among media critics, Levy demonstrates how the unfettered exchange of ideas in cyberspace has the potential to liberate us from the social and political hierarchies that have stood in the way of mankind's advancement. At once a profound historical analysis of the development of human culture and a blueprint for the future, Collective Intelligence is a visionary work that will make a substantial contribution to our views on society through to the next millennium.
