Edward O. Wilson

Naked Economics: Undressing the Dismal Science Charles Wheelan, 2003-09-17 Seeks to provide an engaging and comprehensive primer to economics that explains key concepts without technical jargon and using common-sense examples.

Macroeconomics Jones, Charles I, 2013-12-13 Macroeconomics is the first text to truly reflect today's macroeconomy. In this teachable, coherent book, the author makes complex topics easily understandable for undergraduates and combines innovative treatment of both the short run and the long run with a strong emphasis on problem solving.

The Future of Life Edward O. Wilson, 2003-03-11 Eloquent, practical and wise, this book by one of the world's most important scientists—and two time Pulitzer Prize winner—should be read and studied by anyone concerned with the fate of the natural world. It makes one thing clear ... we know what we do, and we have a choice (The New York Times Book Review). E.O. Wilson assesses the precarious state of our environment, examining the mass extinctions occurring in our time and the natural treasures we are about to lose forever. Yet, rather than eschewing doomsday prophesies, he spells out a specific plan to save our world while there is still time. His vision is a hopeful one, as economically sound as it is environmentally necessary.

Half-Earth: Our Planet's Fight for Life Edward O. Wilson, 2016-03-07 An audacious and concrete proposal...Half-Earth completes the 86-year-old Wilson's valedictory trilogy on the human animal and our place on the planet. —Jedediah Purdy, New Republic In his most urgent book to date, Pulitzer Prize-winning author and world-renowned biologist Edward O. Wilson states that in order to stave off the mass extinction of species, including our own, we must move swiftly to preserve the biodiversity of our planet. In this visionary blueprint for saving the planet (Stephen Greenblatt), Half-Earth argues that the situation facing us is too large to be solved piecemeal and proposes a solution commensurate with the magnitude of the problem: dedicate fully half the surface of the Earth to nature. Identifying actual regions of the planet that can still be reclaimed—such as the California redwood forest, the Amazon River basin, and grasslands of the Serengeti, among others—Wilson puts aside the prevailing pessimism of our times and speaks with a humane eloquence which calls to us all (Oliver Sacks).

Macroeconomics Campbell R. McConnell, Thomas Paul Barbiero, Stanley L. Brue, 2002 The major goals of this revision

have been to streamline the text and to present more student oriented examples. We are also providing a new design with enhanced four colour graphics. Much fine tuning and trimming has gone into almost every chapter resulting in a more approachable textbook for your students. Several chapters that are rarely used will now appear on the book's website. The 9th edition will be much better integrated with the book's website where students can get additional information and/or current events associated with many major topics in the text. Also, the website will have Want to see the Math Notes for those instructors that choose a more sophisticated math treatment of the major topics in both Micro and Macro. Another commitment to Instructor Support will be the annual updating of time sensitive PowerPoint slides.

Principles of Agricultural Economics Andrew Barkley,Paul W. Barkley,2013-03-05 This book showcases the power of economic principles to explain and predict issues and current events in the food, agricultural, agribusiness, international trade, natural resources and other sectors. The result is an agricultural economics textbook that provides students and instructors with a clear, up-to-date, and straightforward approach to learning how a market-based economy functions, and how to use simple economic principles for improved decision making. While the primary focus of the book is on microeconomic aspects, agricultural economics has expanded over recent decades to include issues of macroeconomics, international trade, agribusiness, environmental economics, natural resources, and international development. Hence, these topics are also provided with significant coverage.

A Sand County Almanac Aldo Leopold,2020-05 First published in 1949 and praised in The New York Times Book Review as full of beauty and vigor and bite, A Sand County Almanac combines some of the finest nature writing since Thoreau with a call for changing our understanding of land management.

Networks, Crowds, and Markets David Easley,Jon Kleinberg,2010-07-19 Are all film stars linked to Kevin Bacon? Why do the stock markets rise and fall sharply on the strength of a vague rumour? How does gossip spread so quickly? Are we all related through six degrees of separation? There is a growing awareness of the complex networks that pervade modern society. We see them in the rapid growth of the internet, the ease of global communication, the swift spread of news and information, and in the way epidemics and financial crises develop with startling speed and intensity. This introductory book on the new science of networks takes an interdisciplinary approach, using economics, sociology, computing, information science and applied mathematics to address fundamental questions about the links that connect us, and the ways that our decisions can have consequences for others.

Loose Leaf for Fundamentals of Corporate Finance Bradford D. Jordan, Professor,Randolph W. Westerfield,Prof Stephen A. Ross,2021-03-01 Fundamentals of Corporate Finance was designed and developed for a first course in business or corporate finance, for both finance majors and non-majors alike. The text is nearly self-contained in terms of background or prerequisites, assuming some familiarity with basic algebra and accounting concepts, while still reviewing important

accounting principles very early on. The organization of this text has been developed to give instructors the flexibility they need. The best-selling text has three basic themes that are the central focus of the book: 1) An emphasis on intuition: the authors separate and explain the principles at work on a common sense, intuitive level before launching into any specifics. 2) A unified valuation approach: net present value (NPV) is treated as the basic concept underlying corporate finance. 3) A managerial focus: the authors emphasize the role of the financial manager as a decision maker, and they stress the need for managerial input and judgment.

Revitalizing Endangered Languages Justyna Olko, Julia Sallabank, 2021-04-29 Of the approximately 7,000 languages in the world, at least half may no longer be spoken by the end of the twenty-first century. Languages are endangered by a number of factors, including globalization, education policies, and the political, economic and cultural marginalization of minority groups. This guidebook provides ideas and strategies, as well as some background, to help with the effective revitalization of endangered languages. It covers a broad scope of themes including effective planning, benefits, wellbeing, economic aspects, attitudes and ideologies. The chapter authors have hands-on experience of language revitalization in many countries around the world, and each chapter includes a wealth of examples, such as case studies from specific languages and language areas. Clearly and accessibly written, it is suitable for non-specialists as well as academic researchers and students interested in language revitalization. This book is also available as Open Access on Cambridge Core.

A Short Course in Intermediate Microeconomics with Calculus Roberto Serrano, Allan M. Feldman, 2012-11-30 This is a textbook for an intermediate level course in microeconomics that uses calculus throughout. Most of the competition either uses no calculus or relegates the math to footnotes and appendices. The text also focuses on theory rather than empirical data. To motivate the analysis, the authors include references to real events and firms, with no distracting separate boxes.

Economics Arthur O'Sullivan, Steven M. Sheffrin, Prentice Hall Staff, 2002-05 *Economics: Principles in Action* is a multi-dimensional, comprehensive high school economics program designed to help students of all abilities achieve a fundamental understanding of key economic principles and their application in the real world. Twenty key economic concepts - developed by The National Council on Economic Education and outlined in the Voluntary National Content Standards in Economics - are introduced and reinforced throughout the program. From case studies and videos to interactive CD-ROMs, the program clarifies key economic principles and help students understand the connections between those principles and everyday life.

Introduction to Economic Growth Charles Irving Jones, 1998 Examining empirical evidence such as how rich are the rich countries, how poor are the poor, and how fast do rich and poor countries grow, noted economist Charles Jones presents major theories of economic growth, from the Nobel Prize-winning work of Robert Solow to new growth theory that has

ignited the field in recent years.

Foundations of Macroeconomics Robin Bade, Michael Parkin, 2001 In *Foundations of Macroeconomics*, Robin Bade and Michael Parkin provide a serious, yet accessible economics course that is focused on helping students understand the basic principles of economics, connecting these principles to today's economic issues, and developing a lasting interest in economics as a relevant part of their own lives. *Foundations of Macroeconomics* features a tightly constructed pedagogical approach that never wavers from its goal to give students an in-depth understanding of important economic principles in a way that is clear, concise, and concerned every step of the way with engaging students' interest and understanding. This text is shorter than most and focused on key concepts but not watered down. The glue that holds together the chapters and the entire teaching/learning package is the Checkpoint feature. Bade and Parkin know that the best time to review material is when it's fresh in students' minds. Checkpoints reinforce the key points of the chapter by amplifying concepts with a full page of practice problems and solutions that immediately reinforce the learning objectives and strengthen students' understanding of the material. *Efoundations*, the text's Web site, free with the purchase of any new copy of the book, includes a complete eText, integrated links to the eStudy Guide, *Foundations Interactive*, *Economics in the News*, and a full range of Web resources including self assessment quizzes with links back to the eText.

Universal Economics Armen Albert Alchian, William Richard Allen, 2018 *Universal Economics* is a new work that bears a strong resemblance to its two predecessors, *University Economics* (1964, 1967, 1972) and *Exchange and Production* (1969, 1977, 1983). Collaborating again, Professors Alchian and Allen have written a fresh presentation of the analytical tools employed in the economic way of thinking. More than any other principles textbook, *Universal Economics* develops the critical importance of property rights to the existence and success of market economies. The authors explain the interconnection between goods prices and productive-asset prices and how market-determined interest rates bring about the allocation of resources toward the satisfaction of consumption demands versus saving/investment priorities. They show how the crucial role of prices in a market economy cannot be well understood without a firm grasp of the role of money in a modern world. The Alchian and Allen application of information and search-cost analysis to the subject of money, price determination, and inflation is unique in the teaching of economic principles. No one has ever done price theory better than Alchian -- that is, no one has ever excelled Alchian's ability to explain the reason, role, and nuances of prices, of competition, and of property rights. And only a precious few -- I can count them on my fingers -- have a claim for being considered to have done price theory as well as he did it. -- Donald Boudreaux, George Mason University. Armen A. Alchian (1914-2013), one of the twentieth century's great teachers of economic science, taught at UCLA from 1958 to 1984. Founder of the UCLA tradition in economics, he has become recognized as one of the most influential voices in the areas of market structure, property rights, and the theory of the firm. William R. Allen taught at Washington University prior to joining the UCLA faculty

in 1952. Along with research primarily in international economics and the history of economic theory, he has concentrated on teaching economics. Universal Economics is his third textbook collaboration with Armen Alchian. Jerry L. Jordan wrote his doctoral dissertation under the direction of Armen Alchian. He was Dean of the School of Management at the University of New Mexico, a member of President Reagans Council of Economic Advisors and of the U.S. Gold Commission, Director of Research of the Federal Reserve Bank of Saint Louis, and President and CEO of the Federal Reserve Bank of Cleveland.

Illicit Trade OECD,2016 This report assesses the magnitude, flows and drivers of illicit trade and the illegal economy including: narcotics, human trafficking, wildlife, sports betting, counterfeit medicines, alcohol and tobacco. The negative socio-economic impacts that these markets have in consumer countries are as worrisome as the governance gaps that are exploited in source countries. This report examines each illicit sector in terms of the geographic sources, destinations and key trade routes, the current trend of infiltration by organized crime networks, and good practices or future policy solutions with which to combat illicit trade within the various sectors.

Microeconomics Campbell McConnell,Stanley Brue,Sean Flynn,2008-10-22 McConnell and Brue's Microeconomics: Principles, Problems, and Policies is the leading Principles of Microeconomics textbook. It continues to be innovative while teaching students in a clear, unbiased way. The 18th Edition builds upon the tradition of leadership by sticking to 3 main goals: help the beginning student master the principles essential for understanding the economizing problem, specific economic issues, and the policy alternatives; help the student understand and apply the economic perspective and reason accurately and objectively about economic matters; and promote a lasting student interest in economics and the economy.
