Introduction to the Mathematics of Computer Graphics Nathan Carter,2016-12-31 This text, by an award-winning [Author];, was designed to accompany his first-year seminar in the mathematics of computer graphics. Readers learn the mathematics behind the computational aspects of space, shape, transformation, color, rendering, animation, and modeling. The software required is freely available on the Internet for Mac, Windows, and Linux. The text answers questions such as these: How do artists build up realistic shapes from geometric primitives? What computations is my computer doing when it generates a realistic image of my 3D scene? What mathematical tools can I use to animate an object through space? Why do movies always look more realistic than video games? Containing the mathematics and computing needed for making their own 3D computer-generated images and animations, the text, and the course it supports, culminates in a project in which students create a short animated movie using free software. Algebra and trigonometry are prerequisites; calculus is not, though it helps. Programming is not required. Includes optional advanced exercises for students with strong backgrounds in math or computer science. Instructors interested in exposing their liberal arts students to the beautiful mathematics behind computer graphics will find a rich resource in this text.

Introduction to Crime Scene Photography Edward M. Robinson,2012-08-13 From the author of Crime Scene Photography, 2nd Edition, this introductory text serves as a detailed nuts-and-bolts version of its big brother, currently required reading for certification by the IAI Crime Scene Certification Board. Written for those just beginning their educations related to crime scene investigations, Introduction to Crime Scene Photography shares many of the features of the advanced text. This text initiates the novice to all the essentials of basic crime scene photography techniques. And, it provides a smooth transition to the more complicated and advanced techniques found in the larger text. The beginning of the book deals with basic theory and science of photography. This acquaints the reader with knowledge required to take superior

photographs using composition, lighting and focus. Then follows photographing the crime scene, including specialty types of photography such as ultraviolet, fluorescence and infrared, going digital, using photos specifically to document bodies, wounds, and other related components to the crime scene. Also included are two chapters on the legal aspects of forensic photography and digital image processing--Source other than Library of Congress.

Introduction to Web Interaction Design Michael Macaulay,2017-07-06 This book introduces standard and new HTML5 elements and attributes and CSS3 properties commonly used in Web design as well as design guidelines for their effective use. Its approach of explaining every line of code in the examples it uses to show the usage of the HTML elements and CSS properties introduced makes it an invaluable Web design resource for beginners as well as intermediates looking to fill in gaps in their knowledge. In addition, the inclusion of user-centered design process stages and how they are best managed in website development makes the book unique in its area. Also, the book's approach of including challenges after each topic to help refresh readers' knowledge, as well as make them think, ensures that there are ample activities to keep learners motivated and engaged. Key Features Comprehensively covers standard and new HTML5 elements and attributes and CSS3 properties. Includes a lot of challenges/exercises; one after each HTML element or CSS property introduced and demonstrated with examples. Example codes can be copied and pasted as-is to implement and experiment with. For every HTML element or CSS property introduced, guidelines are provided, where relevant, on how to best use them in a design to enhance usability and accessibility. Includes comprehensive explanation of flexible box and grid layout models and how to use them to create responsive and adaptive Web design. Covers the importance of visual aesthetics in design, including design elements and principles and examples of how they can be applied in Web design to produce good user experience. Includes comprehensive guidelines on how to design for standard and mobile screens, including discussion of touch gesture interaction design and standard gestures and the functions for which they are most commonly used. Introduces the stages of user-centered design process, including Web accessibility and user-experience testing, and managerial aspects of Web

development, including intellectual property. Provides a brief introduction on how to make HTML and CSS codes more compact and more efficient and how to combine them with other languages commonly used in Web design and development, such as JavaScript, AJAX, and PHP.

BTEC First ICT Practitioners Sharon Yull,2007-07-11 BTEC First ICT Practitioners is a key new course book for the 2006 BTEC First ICT Practitioner schemes from Edexcel. Full coverage is given to the core units of the Certificate and Diploma (units 1 and 2) and to selected specialist units: * Using ICT to Present Information (Unit 1) * Introduction to Computer Systems (Unit 2) * Website Development (Unit 4) * Networking Essentials (Unit 6) * Database Software (Unit 9) * Spreadsheet Software (Unit 10) * ICT Graphics (Unit 18) Each chapter in the textbook corresponds to one of these units of the syllabus. Students of BTEC First ICT programmes will find this text essential reading for the duration of their study - all the core material they will be following throughout their course is included in this book. Each chapter includes numerous illustrations, learning outcome summaries, definitions, learner activities, test your knowledge quiz questions and exercises. The result is a clear, straightforward and easily accessible text, which encourages independent study and acts as a reference to various topics within the qualification. The choice of specialist units reflects the breadth of Information and Communication Technology, rather than focusing on specific computing areas such as hardware and programming, and puts the emphasis on practical rather than academic units. It provides students with an excellent portfolio of knowledge and skills that will enable them to progress onto higher qualifications, such as the BTEC National, AS and A2, or to suitable employment within the ICT sector. Sharon Yull is a Senior Lecturer at City College Norwich and a Senior Subject Examiner for Higher Nationals in Computing for Edexcel. Sharon also runs the Training and Education Company, an IT and education consultancy, and has written books for other BTEC IT qualifications.
