Introduction to Complex Analysis in Several Variables Volker Scheidemann, 2023-04-26 This book gives a comprehensive introduction to complex analysis in several variables. While it focusses on a number of topics in complex analysis rather than trying to cover as much material as possible, references to other parts of mathematics such as functional analysis or algebras are made to help broaden the view and the understanding of the chosen topics. A major focus are extension phenomena alien to the one-dimensional theory, which are expressed in the famous Hartog's Kugelsatz, the theorem of Cartan-Thullen, and Bochner's theorem. The book aims primarily at students starting to work in the field of complex analysis in several variables and instructors preparing a course. To that end, a lot of examples and supporting exercises are provided throughout the text. This second edition includes hints and suggestions for the solution of the provided exercises, with various degrees of support.

The Politics of Urban Sustainability Transitions Jens Stissing Jensen, Matthew Cashmore, Philipp Späth, 2018-10-17 Cities, the world over, are increasingly recognised to be both a principal source of the environmental and social sustainability challenges facing contemporary society and a critical site for addressing these challenges. Socio-technical systems are at the heart of these challenges as they configure central aspects of urban life: from mobility and energy infrastructures to leisure activities and patterns of mobility. This observation has led to substantial interest in how societies might initiate and actively steer radical transitions in these systems in the pursuit of sustainable urban futures. This book contributes to emerging debates on the politics of urban transitions by examining the intimate interlinkages between knowledge, power and governance. Drawing upon real-world examples of urban governance, the authors explore the strategies, struggles and controversies involved in configuring knowledge and how knowledge constructions influence governance by rendering some concerns and issues visible and valuable, while obscuring others. The book draws attention to how novel ways of conceptualising, knowing and observing socio-technical systems may be harnessed productively in redefining the power relationships underpinning unsustainable practices. Understanding these dynamics can ultimately inform and enable new approaches to support much-needed urban transitions. This book provides a compelling examination of urban knowledge politics for the twenty-first century that will be of great value to academics, policy-makers and practitioners working in the social sciences, urban studies, geography, urban governance or sustainability transitions.

Management Careers Made in Germany Alexander P. Hansen, Annette Doll, Ajit Varma, 2019-07-06 This book reveals how to provide the leaders of tomorrow with the right education for a management career Made in Germany. It explains how private universities in Germany are helping to maintain the country's respected educational standards, while also enriching them with exemplary services for international students. The book is intended as a practical guide, addressing any concerns students may have when considering studying at a private German university: admissions, visa, teaching quality and formats, tuition, degrees, subjects, housing, food, security, industry connections, and international job placement and leadership. It provides concrete strategies on how students can unlock their personal earning potential and how to find a top job at a national or multinational company. The authors demonstrate that a German university degree will generate rapid return on investment. Real-life success stories show how a degree from a private German university can pave the way for international professional success.

CO₂ and CO as Feedstock Manfred Kircher, Thomas Schwarz, 2024-02-20 Climate protection and raw material change require new, sustainable carbon sources for the chemical and fuel industries. In fact, processes that recycle carbon-containing emission and gas streams industrially are reaching industrial practice. They will make an important contribution to reducing carbon emissions and moving towards a true carbon circular economy. This book describes the basics of chemical and biotechnological processes for converting CO and CO₂ into chemicals and fuels. Furthermore, it addresses

potentials for the manufacturing economy, industrial sites and regions and answers the following questions. Which emission and gas streams offer feedstock potential? What processes are already implemented, being tested and under development? What products can be made from gaseous carbon sources? How can carbon emitting and consuming industries be linked into new value chains? What is the regulatory framework? What does the ecological footprint look like? How do the new processes contribute to the regional economy and thus to social acceptance among consumers and among decision-makers in companies and politics? Providing companies with sustainable carbon sources is a central question of the circular economy, which must be answered with technical processes, new cross-sector value chains, adapted infrastructure and further developed framework conditions. This concerns scientists and decision-makers in companies alike. In this book, they as well as interested laymen will find a comprehensive overview of the state of the art in both, technology and research, and of the overriding issues involved in establishing CO₂ and CO as feedstocks.

Intelligent Decarbonisation Oliver Inderwildi, Markus Kraft, 2022-04-22 The book explains the need to decarbonise energy supplies, urban systems and industrial processes to reduce global greenhouse gases and meet the ambitious emissions reduction goals set out in the Paris Agreement 2016. It discusses how the introduction of AI to cyber-physical systems (CPS) can do this, using illustrations throughout to highlight the potential impacts. Intelligent Decarbonisation comprehensively assesses the current and future impact of digital technologies and artificial intelligence (AI) on the decarbonisation of key economic sectors. The book is divided into four parts - Technology, Impact, Implications and Incubation - moving clearly from the theoretical and technical to the real-world effects and areas for future development. It also presents insights into the economic and environmental transformation fostered by digital technologies. Intelligent Decarbonisation brings together work from private and public sector professionals, academics and think tank experts, and provides truly comprehensive insights into the topic. It is an interesting and informative text for policymakers, researchers and industry professionals alike.

Vergleich zwischen privaten und öffentlichen hessischen Hochschulen im ingenieurwissenschaftlichen Bereich Bernd Jeckel, 2009-09-29 Inhaltsangabe: Einleitung: Diese Untersuchung behandelt die Thematik: Vergleich zwischen privaten und öffentlichen hessischen Hochschulen im ingenieurwissenschaftlichen Bereich. Hierbei wird primär die hessische Hochschullandschaft auf ihr Angebot an Ingenieurstudiengängen untersucht und zur Datenbasisverbreiterung bzw. zur Erweiterung der Grundgesamtheit der empirischen Untersuchung wird auch das Nachbarbundesland Rheinland Pfalz näher analysiert. Bei einer weiteren Fokussierung wird der Fachhochschulbereich hervorgehoben und ebenfalls werden die Unterschiede und Gemeinsamkeiten von Universitäten und Fachhochschulen aufgezeigt. Die Zielsetzung der Industrie und Handelskammer (IHK) Darmstadt besteht darin eine Methodik zu entwickeln, die geeignet ist, Hochschulen in öffentlicher und privater Trägerschaft, deren Kosten und Qualität gegenüberzustellen und zu vergleichen. Hierbei muss auch geprüft werden, wie eine Hochschule mit der jeweiligen Trägerschaften und deren Spezifika definiert werden kann. Dabei werden große Unterschiede zwischen öffentlichen und privaten Hochschulen angenommen. Ergänzend zur Zielvorgabe ist noch zu erwähnen, dass diese Arbeit eine Basis für nachfolgende Untersuchungen darstellen soll, falls es sich als nicht möglich herausstellen sollte, detailliertes und konkretes Zahlenmaterial im vorgegebenen Zeitrahmen zu erhalten. Hierzu gehört auch das Aufzeigen, inwieweit monetäre und nichtmonetäre Kennzahlen verfügbar, relevant und vergleichbar sind. Demnach besitzt das Auffinden, Aufzeigen und Bewerten von Quellen für eventuelle Nachfolgeuntersuchungen, die beispielsweise (bspw.) andere Fächergruppen fokussieren könnten, eine große Bedeutung. Nach dem Auffinden einer Kennzahl ist stets zu hinterfragen, welche Bestandteile diese aus unterschiedlichen Quellen aufweist. Von Interesse ist unter anderem die Analyse

wie die Kostenstrukturen aufgebaut und ob Kostentreiber auffindbar sind. Außerdem wird herauszustellen sein, wie Qualität im Hochschulbereich definier- und messbar ist. Auch auf die Spezifika der Ingenieurwissenschaften in Abgrenzung zu anderen Fächergruppen, wie den Wirtschaftswissenschaften wird eingegangen. Diese benötigen aufgrund der fehlenden handwerklichen Seite, eine weniger kostenintensive Infrastruktur. Inhaltsverzeichnis: Inhaltsverzeichnis: 1.
