**If Animals Could Talk** Dr. Werner Gitt, 2006-02-01 If animals could tell us about themselves, using our scientific knowledge, if they could tell us about the way they live, the special way they are made and many details about their individual design - what they would say would be unique praise to the Creator. Did you know that while in flight, the sparrow's heart can beat up to 760 times per minute? Or that a baby blue whale grows at a rate of 7.28 pounds an hour while it's nursing, a grand total of 17 tons by the end of the nursing stage? How about that glow worms have a light output efficiency of 100% as compared to only 4% for our incandescent bulbs? Dr. Werner Gitt, one of the foremost creationist speakers in the world, uses his scientific expertise in this book to show the unique design features of some of God's most captivating creations. All people, young and old, layperson or expert, will be able to understand and enjoy this straightforward book. Told from the perspective of the animals being described, *If Animals Could Talk* clearly shows the impossibility of life without design. Dr. Gitt uses simple language to provoke a sense of wonder and awe at the marvelous design of the Creator.

School for Barbarians Erika Mann, Thomas Mann, 2014-04-23 Published in 1938, this well-documented indictment reveals the systematic brainwashing of Germany's youth, involving the alienation of children from parents, promotion of racial superiority, and development of a Hitler-based cult of personality.

*Desert Rat 1940-43* Tim Moreman, 2011-11-22 Osprey's examination of the 'Desert Rats', a popular nickname used to describe first 7th Armoured Division and then all the mixed body of British Commonwealth troops - British, Australian, New Zealand and Indian - that fought against Axis forces in North Africa between 1940 and 1943. For a long period during the early years of World War II (1939-1945), this was the only theatre of war where the United Kingdom could strike back against the Axis powers, and the seesaw desert war fought out along the coast of the Mediterranean in Egypt, Libya and then Tunisia proved a harsh testing ground for British arms - in terms of organization, equipment and methods of waging war. The distinctive dress, equipment and weapons developed and carried by the Desert Rats into battle will be examined as will the expansion, organization and training of the desert army. To illustrate the distinctive combat experience gained by the Desert

Rats between 1940 and 1943, three representative operations will be examined in detail - Operation Compass in 1940, the battle of Gazala in May 1942 and finally the last phase of the decisive fighting at El Alamein in October-November 1942. Accompanied by full-color illustrations, this title will shed new light on these fascinating troops.

Forgotten Connections Klaus Mollenhauer,2013-10-30 Klaus Mollenhauer's *Forgotten Connections: On Culture and Upbringing* is internationally regarded as one of the most important German contributions to educational and curriculum theory in the 20th century. Appearing here in English for the first time, the book draws on Mollenhauer's concern for social justice and his profound awareness of the pedagogical tension between the inheritance of the past and the promise of the future. The book focuses on the idea of *Bildung*, in which philosophy and education come together to see upbringing and maturation as being much more about holistic experience than skill development. This translation includes a detailed introduction from Norm Friesen, the book's translator and editor. This introduction contextualizes the original publication and discusses its application to education today. Although Mollenhauer's work focused on content and culture, particularly from a German perspective, this book draws on philosophy and sociology to offer internationally relevant responses to the challenge of communicating cultural values and understandings to new generations. *Forgotten Connections* will be of value to students, researchers and practitioners working in the fields of education and culture, curriculum studies, and in educational and social foundations.

*Late Marxism* Fredric Jameson,2020-05-05 In the name of an assault on totalization and identity, a number of contemporary theorists have been busily washing Marxism's dialectical and utopian projects down the plug-hole of postmodernism and post-politics. A case in point is recent interpretation of one of the greatest twentieth-century philosophers, Theodor Adorno. In this powerful book, Fredric Jameson proposes a radically different reading of Adorno's work, especially of his major works on philosophy and aesthetics: *Negative Dialectics* and *Aesthetic Theory*. Jameson argues persuasively that Adorno's contribution to the development of Marxism remains unique and indispensable. He shows how Adorno's work on aesthetics performs deconstructive operations yet is in sharp distinction to the now canonical

deconstructive genre of writing. He explores the complexity of Adorno's very timely affirmation of philosophy - of its possibility after the end of grand theory. Above all, he illuminates the subtlety and richness of Adorno's continuing emphasis on late capitalism as a totality within the very forms of our culture. In its lucidity, Late Marxism echoes the writing of its subject, to whose critical, utopian intelligence Jameson remains faithful.

*Victorian Popularizers of Science* Bernard Lightman, 2009-10-15 The ideas of Charles Darwin and his fellow Victorian scientists have had an abiding effect on the modern world. But at the time *The Origin of Species* was published in 1859, the British public looked not to practicing scientists but to a growing group of professional writers and journalists to interpret the larger meaning of scientific theories in terms they could understand and in ways they could appreciate. *Victorian Popularizers of Science* focuses on this important group of men and women who wrote about science for a general audience in the second half of the nineteenth century. Bernard Lightman examines more than thirty of the most prolific, influential, and interesting popularizers of the day, investigating the dramatic lecturing techniques, vivid illustrations, and accessible literary styles they used to communicate with their audience. By focusing on a forgotten coterie of science writers, their publishers, and their public, Lightman offers new insights into the role of women in scientific inquiry, the market for scientific knowledge, tensions between religion and science, and the complexities of scientific authority in nineteenth-century Britain.

**Expository Science: Forms and Functions of Popularisation** T. Shinn, Richard P. Whitley, 2012-12-06 The prevailing view of scientific popularization, both within academic circles and beyond, affirms that its objectives and procedures are unrelated to tasks of cognitive development and that its pertinence is by and large restricted to the lay public. Consistent with this view, popularization is frequently portrayed as a logical and hence inescapable consequence of a culture dominated

by science-based products and procedures and by a scientific ideology. On another level, it is depicted as a quasi-political device for channeling the energies of the general public along predetermined paths; examples of this are the nineteenth-century Industrial Revolution and the U. S. -Soviet space race. Alternatively, scientific popularization is described as a carefully contrived plan which enables scientists or their spokesmen to allege that scientific learning is equitably shared by scientists and non-scientists alike. This manoeuvre is intended to weaken the claims of anti-scientific protesters that scientists monopolize knowledge as a means of sustaining their social privileges. Popularization is also sometimes presented as a psychological crutch. This, in an era of increasing scientific specialisation, permits the researchers involved to believe that by transcending the boundaries of their narrow fields, their endeavours assume a degree of general cognitive importance and even extra scientific relevance. Regardless of the particular thrust of these different analyses it is important to point out that all are predicated on the tacit presupposition that scientific popularization belongs essentially to the realm of non-science, or only concerns the periphery of scientific activity.
